# Forest Scientific Competitive Advantages

The more research you do, the more convinced that although Forest Scientific Corporation may not always be the lowest price, it is the best quality, value, and best choice for your school.

1. **Made bi-coastally in the USA** at our world headquarters in Tionesta, PA and in Phoenix, AZ.
2. **Single Source, On-Site, Parts & Labor 36 month warranty** on all new CNC machines made by Forest Scientific Corporation. Most of our competitors warranties are 1 year and parts only. This means that you will save the \$3,000.00- \$7,500.00 that others charge to have someone come on-site per visit from the factory if a problem occurs during the warranty.  
**Do not assume other manufacturers will come to your school for free. They won't.**
3. **On-site training** is available for you and your students to ensure a successful start. It is more effective for initial training to be on your own equipment than to go to a training site. With your approval, students are trained to assist and help train other students. **Written & video tutorials** and curriculum are available to show your students while teaching classes. Additional training is available on-site, at one of our training centers, and over the internet.
4. **Free phone and internet support is available nearly 24/7.** Versus being charged by the minute during restricted office hours to get help. You can talk to someone in the evening and on weekends so you are not limited to office hours. Even our CEO freely gives out his cell number to call or text.
5. Unless otherwise specified, **all FSC machines come fully assembled.** Most of our competitors erector set kits will require 40-80+ hours of your time to assemble. Our machines are often running within an hour of arrival if the electricity & airline are ready. Buy a machine, not a box of parts.
6. **Our CNC controls connect to the computer via USB or Cat 5,** not outdated parallel port, serial port, ISA ports, or other port that require a DOS or other outdated computer. **Do not assume that the technology is current.** Many of the best marketed products are very out of date.
7. Hardened, profiled, made in USA, **Precision NSK or THK linear ways and bearings not just wheels on plate steel or angle iron.** These machines cannot be bumped out of place like most of the machines in the same price range. The grease fitting on each linear bearing ensure a dependable life.
8. **All our CNC machines use industry standard Fanuc style G&M codes,** not a proprietary language. Thus you are teaching marketable skills, not just playing with a dead end *toybot*. You can **use any CAD/CAM software producing industry standard G-Codes** such as Mastercam, Surfcam, Edgecam, Enroute, Vcarve, Fusion 360, SolidWorksCam, Rhinocam, Inventor with HSM, and more.
9. We use more powerful stepper & servo motors on our machines to be more reliable.
10. **Welded steel frames,** and structural aluminum hold up better in the long term than bent sheet metal and bolted angles because they will not work loose or get out of alignment over time.
11. FSC machines have an Emergency Stop and safety reminders for users to operate the machine safely.
12. Forest Scientific Corporation machines and upgrades are designed to be updated at a low cost when technology changes.
13. **Our local dealers are caring professionals providing on-site support second to none.**

Dear Educators:

Thank you for reviewing this edition of our educationally priced catalog. Thriving through the age of Covid we have all needed to make changes and adapt. Prior to that time our mobile maker spaces were used to share equipment between schools, recruitment of students into more advanced programs, and other outreach programs. During Covid mobile maker spaces allowed for social distancing and made it possible to work in a safer outdoor environment. In some communities after school programs were able to stay active. We can equip your van or trailer, or provide a turnkey package Some trailers and vans are set up to work in, while others are designed primarily for transporting equipment. Factors affecting how they are used include the climate, how long the equipment will be in any one place, and the focus of it's use.

You may have noticed our new logo above on the left. Our logo had the old look for the last 30 years and it was due to be updated with a new high tech look for modern times. It is what many customers have called our equipment for a long time. I often hear clients say "I have a Forest CNC."

We manufacture everything in the United States in Tionesta, PA and Phoenix, AZ. Forest Scientific Corporation provides a 36 month single source, on-site parts & labor warranty on all new machines we manufacture unless otherwise noted, a 24 month on-site parts & labor warranty on Laser engraver cutters, and an 18 month on-site warranty on all upgrades and used machines. We provide on-site training and Project Based Curriculum. When you have any questions or need creative strategies to finance your order, please do not hesitate to call me any time at 1-800-956-4056 X 1001 or call/text my cell +1-412-726-0574.

## Convert-A-Table CNC Router / Plasma Models

MCAT 24" x 20"	Convert-A-Table	\$21,999.00

MCAT 48" x 48"	Convert-A-Table	\$29,999.00
MCAT 48" x 96"	Convert-A-Table	\$34,999.00
MCAT 60" x 120"	Convert-A-Table	\$39,999.00

Includes: Plasma water table, router clamping table, 3-1/2HP router, Powermax 45, Automatic Torch height, Break-a-way system, welded steel stand, dust hood, CAD/CAM, Control computer, computer arm, and starter set of bits and deluxe clamp set. Powermax 45 requires 240V/50A, the rest of the machine Operates on 110V 30A 8." Z Travel Floor space 2' greater than work area.

Convert-A-Table easily changes from a CNC Router to a CNC Plasma cutter. This is a great option if you have very limited space and only need one function at a time. The disadvantages are that you only have one machine instead of 2 and these machines can not have a vacuum table system due to the conversion between router and plasma. The 48"X20" machine makes it possible to fit through a standard 36" door. With this heavy duty frame that can plow through wood with the robust 3-1/4HP router while the water table is sealed off. Remove the router table and you have the water table for plasma cutting. No other machine is designed to correctly do both Routing and Plasma cutting well. Conversion between the 2 functions takes less than 10 minutes.

# GET OLD MACHINES OUT OF THE JUNK PILE

## We Service all brands

## Stretch your budget

Unlike new equipment, upgrades usually do not come out of your own budget. Most upgrades are financed through other budgets including: district repair budgets; technology funds since we are changing the computer in the machine; or through special needs funds. Once these machines are upgraded, they will be much easier for a special needs student to be successful. Upgrades often make it possible for the vocational-technical supervisor to tap into funds that otherwise would not be available. Equipment purchased under Perkins can often be repaired under Perkins. Also, it is often much easier to get school boards to approve repairs on existing equipment than purchasing new equipment. Depending on the machine, most upgrades range from 1/2 to 1/20th of the replacement cost of a machine and will usually allow it to operate better than new.

**CNC Upgrade Price:** Includes everything needed - software, electronics, install, 18 month warranty, and training. TurnKey package includes computer and CAD/CAM
