

If you can't take the students
to the technology ...

... take the technology to the students!

You are judged by the company you keep!

Having an FPTI™ training system in your laboratory will tell its own story about the quality of your hydraulics training program.

Why you should choose FPTI™ as your hydraulics education partner!

SAFETY-BASED TRAINING

We are the only hydraulics training company that makes safety the cornerstone of everything we develop. You will feel confident knowing that students who graduate from your training courses will have the knowledge to work safely with hydraulics, and moreover, be able to cultivate hydraulic safety wherever they go.

In keeping with our philosophy of “safety-based” training, the MF102-H series simulators are designed to teach students everything they need to know about OSHA’s and MSHA’s lockout standards.
